Posture correction: from assessment to a daily habit

PROBLEM & MARKET

Back and posture problems are mass-scale, yet correction tools give no real feedback

619 M
people with low back pain (2020), 843M projected by 2050. Leading cause of disability worldwide[1]

$1.5B
posture corrector market in 2025 → $2.9B by 2035, 6.8% CAGR[2]

96%
of people assessed by us show posture disorders — across 1,000+ assessments

PRODUCT

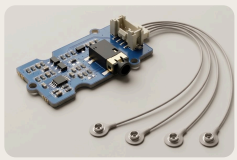

STAT — sensor-equipped clothing that corrects posture

- **Reads.** Tilt at the 7th cervical vertebra and back-muscle activity left and right; both signals are cross-checked across four movement phases.
- **Prompts.** The central module gives a gentle vibration when posture drifts — like a tap on the shoulder.
- **Reinforces.** Subscription app: personal calibration, warm-ups, progress diary. Builds a motor skill, not a reminder.

Alternatives — sessions (effect lasts while you attend), neck "collars" (signal without learning) and braces (support instead of skill). Non-medical product: status worked through over ~2 years with specialists, including Roszdravnadzor experts. Price — RUB 130K (conservative case) + subscription.

PROOF POINTS

- **Assessment already earns:** ~RUB 20M revenue in 1.3 years (B2C and B2B), 1,000+ posture assessments, 10,000+ correction sessions.
- **Core technology at TRL 9;** 2 paid STAT pre-orders at RUB 169K before launch.
- **Cost to replicate — RUB 60M+.** 18+ months runway without this round: proceeds are for acceleration.
